

OPENVERSE TOKEN ROADMAP

The Future of Multi-Chain DeFi

OpenVerse is building the foundation for native multi-chain composability. From infrastructure to global ecosystem scaling.

5 PHASES | 3+ CHAINS | 10K+ TPS

IN PROGRESS

FOUNDATION

- MultiChain Virtual Machine (MVM) architecture design
- EVM compatibility layer — Ethereum RPC parity
- Core developer tooling & SDK v0.1 release
- Smart contract language support (Solidity, Rust)
- Internal testnet launch & stress testing
- OVT token generation event (TGE) 🎆

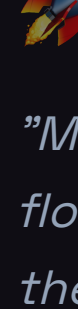

"Like Ethereum in its early days, we are laying the invisible rails that will power the next wave of multi-chain DeFi."

UPCOMING

TESTNET

- Public testnet — open to developers & validators
- VRC10 token standard specification finalized
- Cross-chain messaging protocol (Solana ↔ ETH ↔ BSC)
- Parallel transaction execution benchmarks
- Bug bounty program launch
- Developer grants program — \$2M allocated

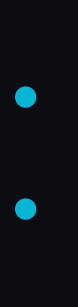

"VRC10 brings a unified token standard across all supported chains — no more fragmented bridging, no more siloed liquidity."

UPCOMING

MAINNET

- Mainnet v1.0 launch — battle-tested & audited
- VRC12 advanced token standard (DeFi primitives)
- CEX listings & deep liquidity provisioning
- DEX pools live — Uniswap, Raydium, PancakeSwap
- Native staking platform — earn OVT rewards
- Security audit by Certik / Trail of Bits

"Mainnet goes live. Liquidity flows. The ecosystem opens to the world."

HORIZON

GROWTH

- 100+ dApps deployed on OpenVerse MVM
- Governance v1 — OVT holders shape protocol upgrades
- Institutional partnerships & TVL milestones
- Cross-chain yield aggregation products
- OpenVerse App Store — curated dApp marketplace
- Ecosystem fund deployments — seeding next-gen DeFi

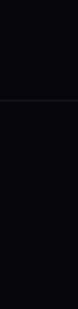

"With infrastructure in place, OpenVerse becomes the go-to layer for multi-chain DeFi builders."

VISION

SCALE

- OpenVerse 2.0 — next-gen parallel execution engine
- Mobile SDK for native dApp development
- AI-native smart contract tooling
- Decentralized sequencer network
- Interoperability with 10+ additional chains
- OpenVerse Foundation — fully community governed

"OpenVerse becomes the invisible glue across all of DeFi — the layer that makes multi-chain feel like one chain."

Why OVT Wins

Native multi-chain composability from day one.

VS ETHEREUM L2S

Native multi-chain, no bridges needed

VS SOLANA

EVM familiarity + parallel speed

VS SEI NETWORK

Broader chain coverage from day one

VS MONAD

Live infra vs pre-launch promises

One Codebase Every Chain.

OpenVerse is building the invisible infrastructure that unites a fragmented industry. We don't believe in bridges, we believe in native multi-chain execution.
